

# NETWARE 3

The **NETWARE 3** is a wall mounted wired controller. It has a Liquid Crystal Display (LCD) and a 3 Events 7-day programmable (ON/OFF) timer. The controller sends instructions to a control board (PCB) residing in the air-conditioning unit. In the event of a power failure a back up battery will maintain the real time clock and the integrity of the control's data.

## FEATURES

- **Cool/Fan/Dry/Heat/Auto** modes.
- **Auto/High/Med/Low** fan speed.
- Optional temperature setting range from 16 °C to 30 °C or 20°C to 30°C.
- Room temperature or user set temperature display.
- **Swing** function.
- **Sleep** function.
- Real-time clock and day display.
- **7-day programmable timer**.
- Error indicator.
- **Key lock** and **Fan lock** features.
- **Battery backup**. In the event of a power failure a back up battery will maintain the real time clock and the integrity of the control's data. When power is resumed (returned/switched on again), the unit will automatically restart using the original settings.
- **Override function** to bypass all timers and turn ON the unit for a fixed period depending on the selection.
- **Timer Active key** to activate and deactivate all set timers.
